

CONCUSSION POLICY

Chaminade is intended to help facilitate an educational plan that allows students with a diagnosed concussion to heal from their injury.

Procedures for students with diagnosed concussions:

1. A Medical Release of Information signed by parents, along with the physician recommended accommodations, will be submitted to the house counselor.
2. Before the student resumes classes, he will meet with his house counselor who will review accommodations provided by the student's physician.
3. The house counselor will communicate the accommodations to the student's teachers.
4. The house counselor continues to meet with the student regularly until an official medical release is issued.
5. The school nurse is available as needed during the school day should concussion symptoms appear.
6. The administration will consider academic modifications such as incompletes and extensions per ongoing medical diagnosis.
7. A student may not participate in Physical Education, CCP co-curricular activities, practices or competitions until all academic accommodations have been lifted, per an official medical release, and a plan is in place with the student's house counselor to complete make-up work. Faculty will inform the house counselors what modifications they are implementing and the house counselor will conduct a follow-up on outstanding assignments and assessments as students are able to complete them.

Recommendations to parents/guardians:

1. Restrict participation in any strenuous co-curricular activities outside of CCP until he is symptom free.
2. Limit exposures to school events and screen time at home to allow for time to heal.

The administration reserves the right to modify the aforementioned concussion procedures.
